
Supplementary Fig. 2. AULROC of readers and AI according to POM. Thin curves represent the AULROC curve for individual 15 readers, red bold curve for reader average LROC for session 1, and green bold curve for reader average AULROC for session 2. In session 2, the average AULROC for POM was significantly higher than that in session 1 (0.923 vs. 0.867, P=0.001). The AULROC for stand-alone AI was 0.924 (bold blue curve). AULROC, area under the localization receiver operating characteristics curve; POM, probability of malignancy; AI, artificial intelligence; LROC, localization receiver operating characteristics curve.
